

Nordic Congress in the field of low vision 18-20 april 2018

At "Utsikten Meetings", Nynäshamn/Stockholm Sweden

Low Vision challenges and methods – Mind the gap

Welcome to the 9th Nordic Congress in the field of low vision aimed at professionals working with people of all ages with vision impairment.

The trend towards an increasingly digitized world that places high demands on accessibility is of great importance to our target group in terms of opportunities for community involvement at different levels and a functioning "everyday life". How can we, in our different roles as professionals, help bridge the gaps that can occur?

Professionals in the field of low vision span many different areas. We need to focus our attention on research and science, while making new knowledge practical in our daily work. Through the exchange of experiences and knowledge, we can be strengthened in our professional roles and develop the content of services and supply.

The conference is held in the form of lectures, posters and workshops. Exhibitors showing new technologies and tools will be in place. Exchanging thoughts and ideas with others is an important part of the congress, and time for networking will be available.

Information will be continuously posted on www.nordisksynkongress.com

Participation fee: 5 900 SEK including full board and housing.
